                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ολ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Db
Sequence 1, Application US/08461002
Patent No. 6214543
GENERAL INFORMATION:
APPLICANT: Riley M.D., Lee W.
TITLE OF INVENTION: DNA Molecule Encoding for Cellular
TITLE OF INVENTION: Uptake of Mycobacterium Tuberculosis and Uses thereof
CORRESPONDENCES: 10
CORRESPONDENCE ADDRESS:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ö

                                                                                                                                                                                                                                                                          The isolated DNA molecule of the invention confers on M. tuberculosis an ability to enter cells and to survive within macrophages. It encodes a polypeptide having a mol. wt. of about 50-55 kDa, pref. 52 kDa. The AA sequence represents a highly hydrophilic protein with a hydrophobic region at its carboxy terminus. It could be a secreted protein, a cytoplasmic protein, or a surface protein with its carboxy terminus attached to the outer membrane of the organism. The deduced AA sequence is in AAK71931.

The encoded protein sequence is given in AAM02301. The DNA was obtd. by ligating A. tuberculosis genomic DNA fragments into pBluescript invasive clones. The DNA includes 2 separate coding regions (Ser also AAT33657-58) coding for the cell entry (AAM02302) and macrophage survival (AAM02303) proteins. It can be used to produce the cellular uptake proteins used as vaccings or to facilitate uptake of other
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       4; Gaps

The protein can be used in a vaccine to prevent M. tuberculosis infection, and provide for the uptake in cells of, e.g. antibiotics, DMA fragments or anti-incoplastic agents. Antibodies raised against it can be used to treat mammals already exposed to treat unammals already exposed to M. tuberculosis, to induce a passive immunity and prevent disease
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              tggatgtgtccacccgccaggccgccgaagccgacctggccggcaaagccgctcaatatc

This DNA sequence comprises Mycobacterium bovis BCG deletion sequence BCGdelta3. A specific genetic deletion of this region results in an avirulence phenotype of the mycobacterium. 2 Other deletion regions (see AAT131535 and AAT131316) have also been detected. Identification involved screening a BCG cosmid library with a radiolabeled probe obtained following DNA subtraction between virulent Mycobacterium tuberculosis H13Rv and avirulent BCG. The deletions provide useful markers for the identification of an avirulent, or a virulent, mycobacterial phenotype. Determination of avirulence requires the detection of the presence or absence of

```
A DNA molecule (AAT3365B) codes for a protein (AAW02303) that confers on Mycobacterium tuberculosis an ability to survive within macrophages. It is a fragment of a larger molecule (AAT33656) obtd. by ligating M. tuberculosis genomic DNA fragments into pBluescript I vector and screening recombinant E. coli strains for Hela cellinvasive clones. It can be incorporated into a vector and used for prodn. Of recombinant macrophage survival protein, which is useful in vaccines or for facilitating uptake of other materials, e.g. therapeutic genes, into mammalian cells. A second DNA molecule tuberculosis the ability to enter mammalian cells.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       118 cgtcccqacgaqctqqcccqctacgccagcgggtcatggactggctacaccccqacggc 177

                                                                                                                                                                                                                                                The present sequence encodes a Mycobacterium tuberculosis cullular uptake protein fragment, which confers on M. tuberculosis an ablility to survive within macrophages.

The protein can be used in a vaccine to prevent M. tuberculosis infection, and provide for the uptake in cells of, e.g.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    antibiotics, DNA fragments or anti-neoplastic agents. Antibodies raised against it can be used to treat mammals already exposed to M. tuberculosis, to induce a passive immunity and prevent disease
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 cgtgctagccaaactggccgccccggcgcgcaccaaccccgacgaccacaccccggtcal

```
synthase proteins. Also described are: (1) polypeptides encoded by all or part of the DNA: (2) expression vectors containing the DNA: (3) host cells transformed by the vectors; (4) preparation of the polypeptides by culture of the transformed; (5) preparation of avermectin aglycon or its derivatives by culture of transformed avermectin producing microor-quisms; and (6) oligomerterlides of 5-60 bases in length containing sense on antiscuss sequences from the avermectin aglycon synthase DNA. The enzymes are useful for the production of modified
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Avermectin adjycone synthase DNA and proteins encoded by all or part of it for the production of avermectin and its derivatives for drug and agrochemical use
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 22011 caccacctcatcacccaacgcgccacctcatgcaaaccatgcccccggcaccatgac 22070

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           host cells, and methods for producing novel polyketides by culturing host cells are claimed. The polyketides obtained are useful as antibiotics and insecticides. Fermentation products
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                associated with reduction. Novel PKS are provided in which in which the reductive loop in a selected module of the Type I PKS is replaced with the equivalent segment from the same or different PKS gene cluster or by a mutated or synthetic segment. Vocious and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The present sequence is that of DNA encoding the first 2 modules of the avermectin polyketide synthase (PKS) of Streptomyces avermitilis. The invention relates to nucleic acids encoding a Type I PKS such as avermectin in which a polylinker with multiple restriction sites replaces or 1 more PKS genes encoding enzymes associated with reduction. Novel PKS are provided in which in the control of the provided in which in the control of the pks are provided in which in the control of the pks are provided in which in the control of the pks are provided in which in the pks are pks a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Mutated Type I polyketide synthase containing a extension module for replacement of a reductive
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          (BIOT-)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Tango-77; human; IL-1ra; cytokine superfamily; inflammation; inhibition; interleukin-1 receptor; IL-1R; regulation; asthma; rheumatoid arthritis; chronic myelogenous leukaemia; psoriasis; inflammatory bowel disease; growth factors; treatment; IL-1 receptor complex; BAC; ss.
                                                                                                    Tango-77 is a member of the cytokine superfamily that is expected to inhibit inflammation by binding to the interleukin-1 receptor (IL-1R). I may also bind to a new receptor so could regulate other cellular processes associated with acute or chronic inflammation, e.g. asthma, chronic myelogenous leukaemia, rheumatoid arthritis, psoriasis and inflammatory bowel disease. It may also induce or suppress interleukins, cytokines and growth factors. Modulators of this protein are used to treat or prevent conditions associated with abnormal levels of inflammation, or activity of IL-1 or its receptor complex.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      02-JUL-1998;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Homo sapiens
                                                                                                                                                                                                                                         AXX02956-X03048 and AXX22301-X22304 are overlapping BAC genomic sequences containing alternatively spliced forms of human IL-Ira. Such fragments are used in the method of the invention which describes the isolation of a novel human TANGO-77 encoding nucleic acid and protein.
                                                                                                                                                                                                                                                                                                                                                 New isolated nucleic acid encoding the new human cytokine Tango-77 used to inhibit inflammation and to screen for specific modulators
                                                                                                                                                                                                                                                                                                                                                                                                                             Pan

DNA encodit under the control of an exogenous promoter pref. lac UV5. The example uses the native beta-1, 3-glucanase gene isolated from Cerskovia xanthineolytica genomic DNA and expressed in pUV5-GIS.
